Unmasking Subdomain Abuse: How to protect against these stealth attacks

RESERVE YOUR SPACE!

**Live Interactive Webinar: Friday February 3rd at 12:00pm EST /
9:00am PST**

Share this webinar:

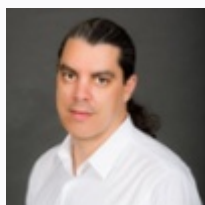

Today most organizations, from retailers to investment banks to automotive companies, believe that protecting their brand starts – and stops -- at the Top-level Domain (TLD). Yet below these shiny TLDs are often dozens, hundreds of abandoned, malicious or dynamic subdomains used for phishing, counterfeiting, and other cybercrime.

Farsight Security, CRO, Andrew Lewman and Recorded Future Vice President of Threat Intelligence & Strategy Levi Gundert will provide an overview of the domain name industry, how cybercriminals are increasingly using both legitimate as well as malicious subdomains to gain entry into networks and commit other cybercrime and the steps security teams can take to uncover subdomain abuse and protect their brand.

Key Points Covered include:

- An overview of the domain name industry
- How cybercriminals use both legitimate and malicious subdomains to gain entry
- The steps security teams can take to uncover subdomain abuse and protect their brand
